

ARGE Conference 2024 Milan

Tommi Arola

Research director

Building information foundation RTS

Together with our networks, we develop a high-quality and sustainable built environment in which people are doing well.

The Building Information Foundation (RTS sr) is a non-profit, impartial and independent influencer in the Finnish real estate and construction industry. The Foundation promotes a sustainable and high-quality built environment that supports people's well-being. The Foundation, together with its networks, implements research and development projects, promotes innovative approaches in the field and accelerates cooperation between practice and research.

Construction digitalization – EU situation picture

Digitalisation is a tool for competitiveness

- **High-performance computing (HPC)** – a unique advantage to exploit in areas such as AI, and to stimulate private investment.
- **AI opportunities for vertical use-cases:** AI developments are an **opportunity** for EU industrial players to boost their competitiveness **but also a risk** to lose their leadership and profitability if AI is not rapidly **integrated in their offerings**.
- **Semiconductors:** de-risk strategic dependencies
- **Data as a strategic resource**

Built environment strategies, regulation and initiatives

We are not alone – digitalisation happens also around the built environment

We are in the middle of a new system dynamics!

New system dynamics requires new digital tools

Digital process management and increased productivity

Digitalised construction product information

Digital product passports and digitalised supply chain

Develop digital building logbook

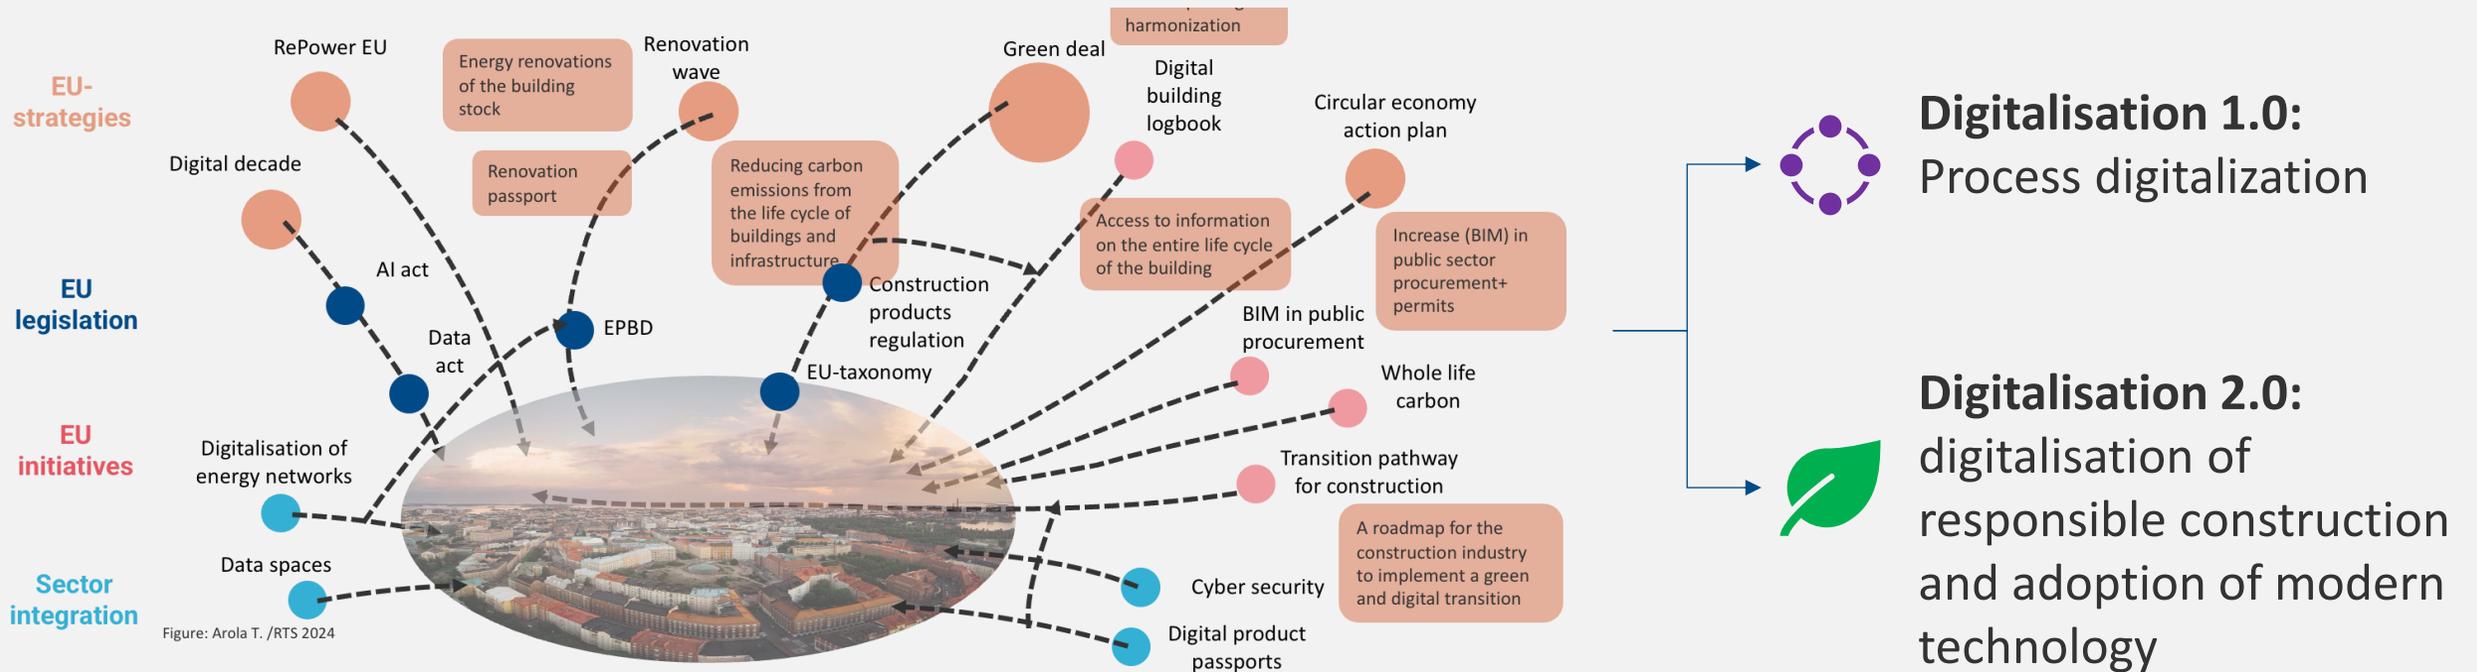

Mainstream the use of digital design tools to facilitate the performance and environmental impact

Increase the use of AI, robotics and drone applications

Building data security and cyber resilience

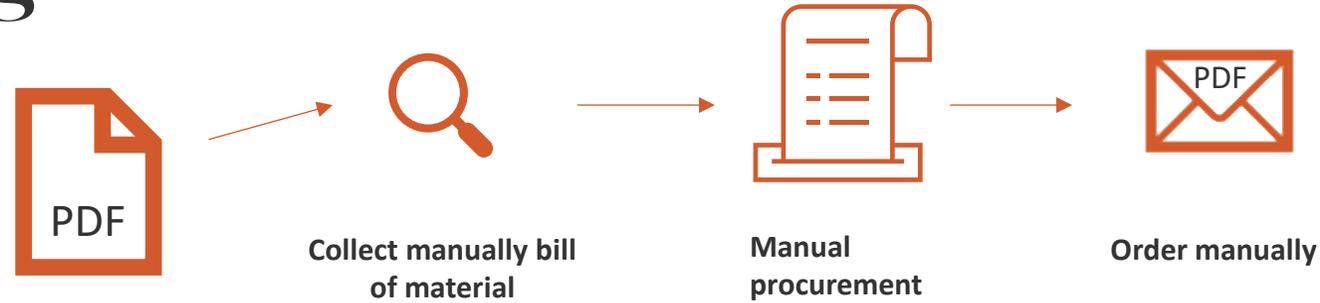

Take away: we need to do two digitalisation parallel

Case-example from Finland: digital supply chain and product traceability

The obstacle: supply chain is manual data processing

Export 2d pdf

Design

BIM

The Design stage is represented by a blue rounded rectangle containing an icon of a person at a laptop with 'BIM' on the screen.

Procurement and supply chain management

The Procurement and supply chain management stage is represented by a yellow rounded rectangle containing an icon of a document.

Production (construction)

The Production (construction) stage is represented by a green rounded rectangle containing an icon of a construction crane.

Building operation and maintenance

The Building operation and maintenance stage is represented by an orange rounded rectangle containing an icon of a wrench.

Transport company

Product manufacturer

The Transport company and Product manufacturer stage is represented by a light pink rounded rectangle containing icons of a truck and a factory.

Supplier manual input to ERP

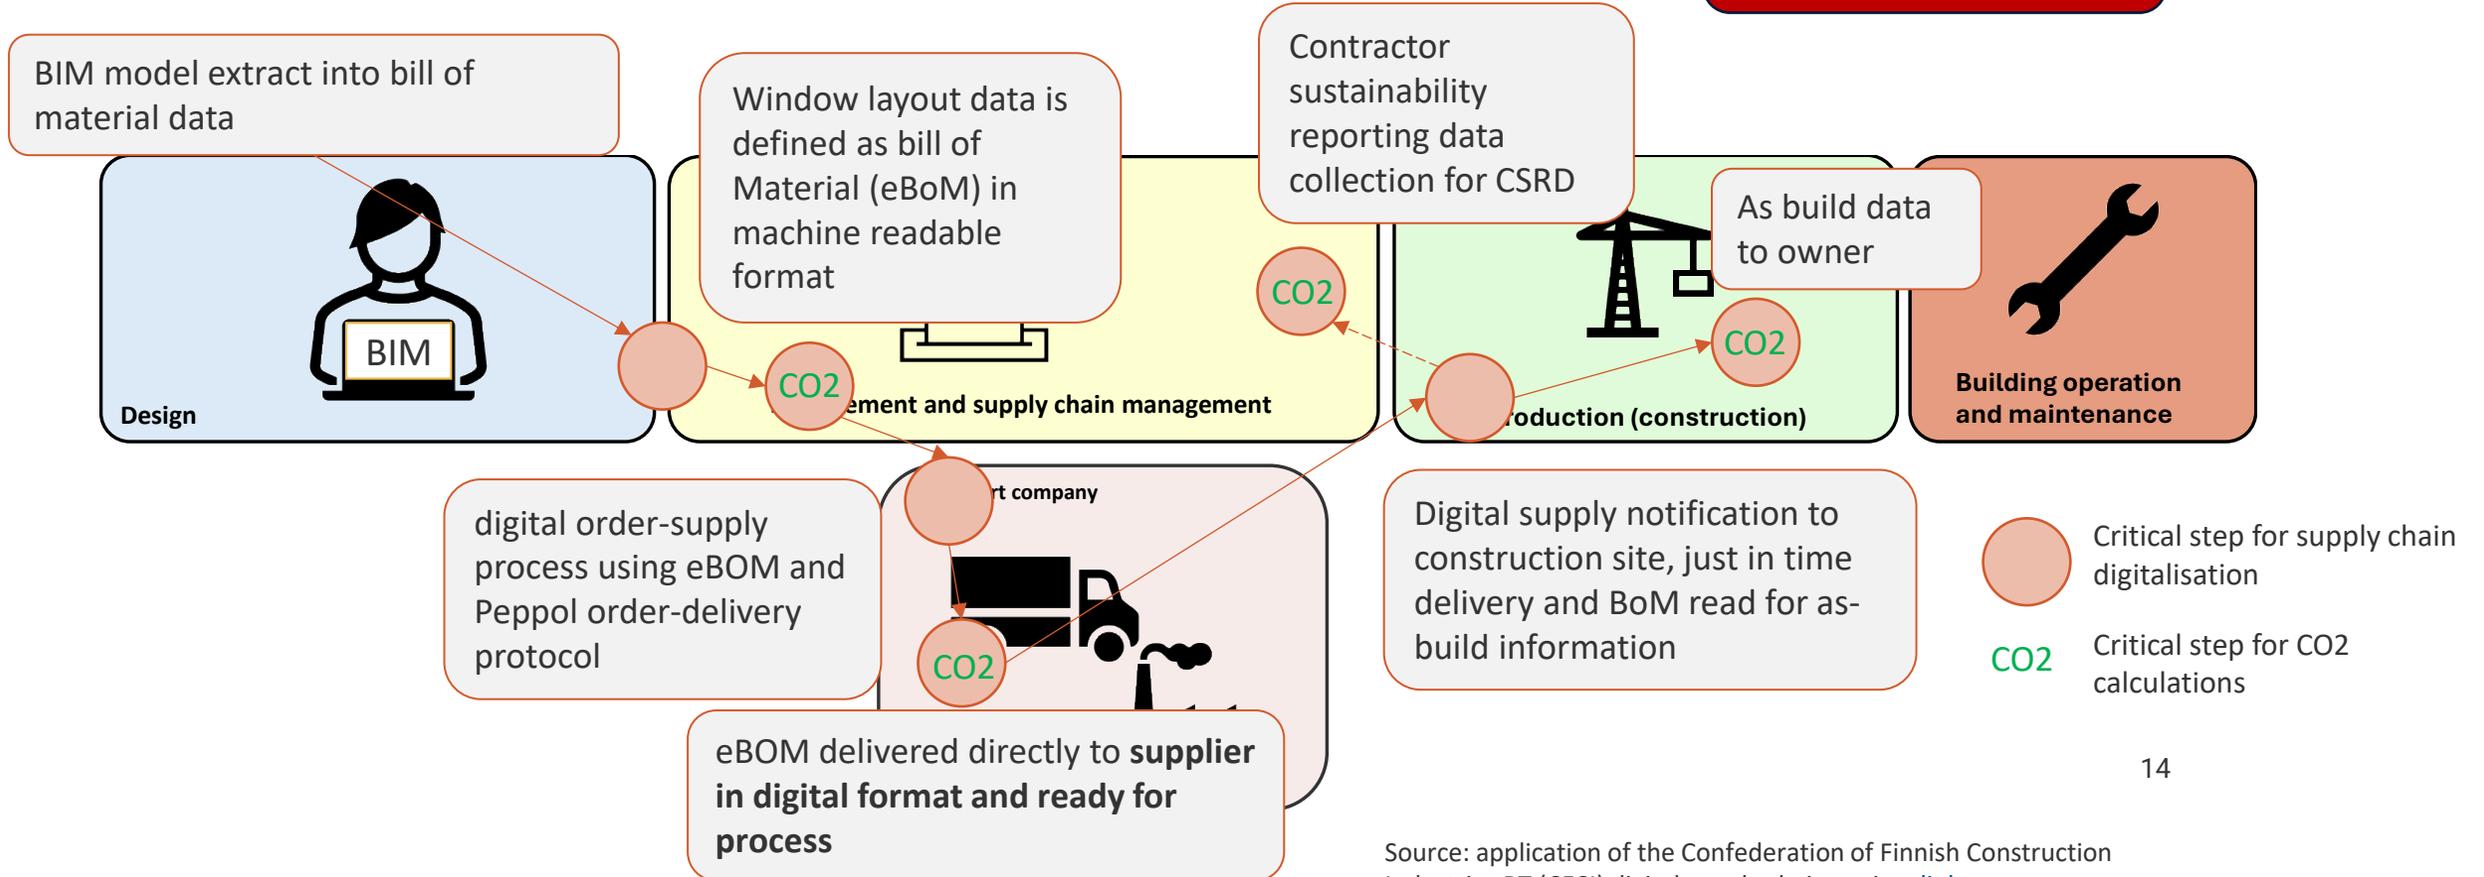

The Supplier manual input to ERP stage is represented by an orange rounded rectangle containing an icon of a hand holding a keyboard.

...at the same time we are
expected to do product
level GWP reporting and
circularity optimization

Holistic system architecture is needed to maintain real product information

This all unlocks e.g:
 - green procurement
 - CO2 calculations based on real products

GWP and sustainability reporting automatically

Source: application of the Confederation of Finnish Construction Industries RT (CFCI) digital supply chain project [link](#)

**Take away 1: digital supply chain with
real product information is a key to
construction competitiveness**

**Take away 2: end-to-end access to
machine readable data is only way to
do digitalisation**

Main takeaways for ARGE digitalization?

- Adapt to digital supply chains
 - Connection to end-to-end digital information process is required for windows, locks, doors : design <> digital order-delivery <> Logistics <> TAKT site management <> digital as-build delivery
- Digital product information and material traceability
 - EU-taxonomy: sustainability reporting needs a digital trajectory
 - CPR: product circular economy, sustainable materials
 - Product digital product passport
- New data roles and cyber security
 - Data act: gives users of connected products greater control over the data they generate, while maintaining incentives for those who invest in data technologies
